Care Plan | COPD and Thyroid

Patient: Maria Gonzalez

Date of birth: 20 November 1945

Room: 107

Allergies: Shellfish (anaphylaxis, severe); Sulfa drugs (hives)

BREATHING

Encourage pursed-lip breathing when breathless. Sit her upright. Oxygen saturation usually runs between 90 and 93 percent.

INHALERS

Tiotropium 18 mcg inhaled once daily at 08:00.

Salbutamol 100 mcg, up to 2 puffs as needed for breathlessness. Tell the nurse if she needs it more than twice in a day.

WHEN TO GET HELP

Call the nurse on duty if oxygen saturation is below 88 percent or she is breathless at rest. Call 911 if her lips look blue or she cannot speak in full sentences.

THYROID

Levothyroxine 50 mcg at 06:30, 30 minutes before breakfast.

ALLERGIES

Severe shellfish allergy: no shrimp, crab or lobster; the kitchen is informed. An epinephrine auto-injector 0.3 mg is kept at the nurse station, for the nurse or trained staff to use; call 911 whenever it is used.

Sulfa drugs cause hives. Cetirizine 10 mg as needed, with nurse approval.

Signed: Dr. Kevin Brooks, GP
